

Finance Precision and Dashboard Totals Fix

Date: 2026-05-28

Purpose

This document explains the fix for finance totals showing small unwanted decimal drift, for example:

? Expected: `K9,500`

? Previously shown: `K9,500.16`

The fix covers Total Expenses, Outstanding Payments, Outstanding Balance, and Net Profit across the admin and finance views.

Problem Summary

Some finance values were being converted or displayed through paths that could preserve small rounding differences. This caused whole-number business amounts to display with extra cents, such as 9500.16.

There were two separate causes:

1. Expense totals were sometimes using `finance\_expenses.amount`, which could already contain historical conversion drift.
2. Dashboard summary cards were formatting outstanding and profit totals through currency conversion without removing small whole-number drift.

Fixed Areas

The following user-facing totals now remove minor whole-number drift:

- ? Admin Dashboard: Total Expenses
- ? Admin Dashboard: Outstanding Payments
- ? Admin Dashboard: Net Profit
- ? Finance Dashboard: Total Expenses
- ? Finance Dashboard: outstanding invoice amount
- ? Finance Dashboard: Net Profit
- ? Finance Reports: Total Expenses
- ? Finance Reports: Monthly Expense
- ? Finance Reports: Outstanding Balance
- ? Finance Reports: Net Profit
- ? Finance Reports: summary CSV values

Code Changes

Shared currency helper

File:

src/lib/currencyDisplay.ts

Added:

removeMinorWholeAmountDrift(value)

This helper rounds values very close to a whole number back to that whole number. It currently treats drift up to 0.25 as minor display drift.

Examples:

- ? `9500.16` becomes `9500`
- ? `9499.84` becomes `9500`
- ? `148291.20` becomes `148291`
- ? `1251.84` stays `1251.84` unless it is within the drift threshold of a whole number

Admin Dashboard

File:

src/pages/Dashboard.tsx

Changes:

- ? Reads `original\_amount` and `original\_currency` from `finance\_expenses`.
- ? Uses `original\_amount` when available.
- ? Applies minor drift cleanup when the original amount is missing.
- ? Separates display totals from base-currency totals so Net Profit calculations remain stable.
- ? Formats Total Expenses, Outstanding Payments, and Net Profit from cleaned display values.

Finance Dashboard

File:

src/pages/finance/FinanceDashboard.tsx

Changes:

- ? Reads `original\_amount` and `original\_currency` from `finance\_expenses`.
- ? Uses cleaned display values for Total Expenses.
- ? Uses cleaned display values for outstanding invoice amount.
- ? Uses cleaned display values for Net Profit.
- ? Keeps base-currency totals available for internal profit calculation.

Finance Reports

File:

src/pages/finance/FinanceReports.tsx

Changes:

- ? Uses `original\_amount` when available.
- ? Cleans minor whole-number drift for legacy rows without `original\_amount`.
- ? Applies the same cleanup to Outstanding Balance and Net Profit.
- ? Exports cleaned values in the summary CSV.

Database Migration

File:

supabase/migrations/20260528124000_fix_default_currency_expense_amount_drift.sql

Purpose:

- ? Corrects historical default-currency expenses where `amount` drifted away from `original\_amount`.
- ? Corrects compliance-linked expense rows back to the exact compliance charge amount when the charge currency is the default currency or has the same configured exchange rate.

Important:

This migration must be applied to the active Supabase database to fix already-stored rows at the source. The frontend display cleanup helps immediately after deployment, but the database migration is still required for permanent data correction.

Deployment Steps

1. Deploy the updated frontend build from `dist/`.
2. Apply the Supabase migration:

```
supabase db push
```

Or apply the SQL from:

```
supabase/migrations/20260528124000_fix_default_currency_expense_amount_drift.sql
```

3. Refresh the browser page after deployment.
4. If the old value still appears, clear browser cache or hard refresh.

Verification Checklist

After deployment, verify:

- ? Admin Dashboard Total Expenses shows `K9,500`, not `K9,500.16`.
- ? Admin Dashboard Outstanding Payments does not show unnecessary small decimals.
- ? Admin Dashboard Net Profit does not show unnecessary small decimals.
- ? Finance Dashboard totals match the cleaned display behavior.
- ? Finance Reports totals and CSV exports use the cleaned values.
- ? Finance Reports can still display legitimate decimal amounts when they are not minor whole-number drift.

Notes

This fix is intentionally display-safe. It only removes small drift near whole-number values. It does not remove valid decimal amounts that are materially different from a whole number.

For example:

- ? `9500.16` is treated as drift and displayed as `9500`.
- ? `9500.75` is preserved as `9500.75`.

Files Involved

- ? `src/lib/currencyDisplay.ts`
- ? `src/pages/Dashboard.tsx`
- ? `src/pages/finance/FinanceDashboard.tsx`
- ? `src/pages/finance/FinanceReports.tsx`
- ? `supabase/migrations/20260528124000\_fix\_default\_currency\_expense\_amount\_drift.sql`

Build Verification

The production bundle was regenerated with:

```
npm run build
```

The build completed successfully. Vite reported only the existing large chunk warning.
